CET257 Enterprise Project: Assignment 2

Task B2: Finalised Zero-Budget Marketing Plan

Team Speed Studios · Lift Right

Client: Sulav G. Raj, Vantec

1. Summary

Team Speed Studios is a four-person software team. Our first product is **Lift Right**, a browser-based 360° manual-handling training simulation for warehouse and logistics teams. This is the final version of our marketing plan. It uses no money: every action costs only the team's time. All channels lead to one place, our company website, where a visitor can read about us and try the working prototype.

Section 6 is an honest log of what has already been done in practice and what is prepared and ready to post. We record an action as done only when it has really happened, and we attach the evidence.

2. Company, Product and Brand

Item	Final decision
Company	Team Speed Studios
Product	Lift Right: 360° manual-handling training simulation
Logo	Navy rounded square with two stacked amber lift arrows and speed lines, beside the wordmark TEAM SPEED STUDIOS (files: TeamSpeedStudios_Logo.png and .svg)
Mission	To make workplace manual-handling training something people actually remember, by letting them practise the decisions rather than just reading about them.
Tagline (final)	Learn safe handling by doing it.
Colours	Deep navy #12233D, amber #F2B544, dark amber #D97706
Website	Live at https://shresthasparas.github.io/Team-Speed/TeamSpeedStudios_Website/ (and a ZIP of the files)

3. Problem, Customers and Message

Our client confirmed that manual-handling induction (posters, PDFs, one-off briefings) is routine and easy to forget once staff are back on the floor. Training is usually approved by more than one person, so each message is aimed at a specific role.

Role	What they care about	Our message
Health and safety manager	Proof that training changed behaviour	Training that proves understanding, not attendance.
Operations or site manager	Cost and time away from the shift	A five-to-ten minute run on the computers you already have.

Role	What they care about	Our message
Warehouse staff and team leaders	Not being lectured at again	Six checkpoints. One warehouse. Can you beat your best score?

Positioning: for warehouse and logistics teams whose manual-handling training is sat through and forgotten, Lift Right is a 360° training simulation that scores the decisions behind a safe lift, not attendance at a session.

4. Zero-Budget Channels and Actions

Channel	What we do	Owner	Target	Status
Company website	Four-page site with logo, mission, team and services, and a "Try Lift Right" button on every page	Swikriti, Sparas	Done	Done
Live demo	Demonstrate the working prototype to the client at the presentation	All four	Presentation day	Done
Existing client	Share the live prototype link with our client and ask for feedback	Shilu	12 September	Done
LinkedIn company page	Create the page and add all four members' profiles	Shilu	This week	Ready to do
LinkedIn posts	Three formats: demo clip, "spot the mistake" and "behind the build"	Shilu, Swikriti	Weekly	Ready to post
Direct outreach	Personal emails to local warehouse and logistics employers offering a free demo, with one follow-up	Shilu, Sparas	5 emails	Ready to send
Demo reel	Three short vertical clips (15 to 30 seconds) with captions	Namshu	This week	Storyboard ready

Every post and email points to the website. We chose LinkedIn because our customers (health and safety, operations and learning professionals) are there, and it costs nothing.

5. Measuring Success

We review these at our weekly meeting: whether each prepared action goes out on schedule, how many outreach emails get a reply, how many people open the prototype link, and whether any prospective client asks for a pilot. Our target is five outreach emails and a first post within one week of submission.

6. Evidence of Enactment

Entries marked "Done" have happened and have evidence. Other rows stay empty until the team has really done the action, and then the date and a screenshot or link are added.

No.	Action	Date	Evidence	Result
1	Company website published	11 October 2026	Website URL and ZIP submitted with B2	Site live with logo, mission, team and services

No.	Action	Date	Evidence	Result
2	Live demo and presentation to the client	Presentation day	Team photo and signed feedback form (see B3, Appendix D)	Client rating 24/25
3	Prototype link shared with the client	12 September	Email screenshot (B3, C9)	Link shared and client thanked
4	LinkedIn company page created			
5	First LinkedIn post (Appendix D graphics)			
6	Outreach emails sent (Appendix B)			
7	First demo clip posted (Appendix C)			

7. Risks and Ethics

Risk	How we manage it
A prospect's computer cannot run the live demo	Test on our own laptops first and keep the recorded demo video as a backup.
Few replies to outreach	Personalise each email, follow up once, and start with contacts we already have.
Limited time alongside coursework	Stick to the fixed actions in section 4 and avoid an open-ended campaign.
A student team may not be trusted	Offer a free live demo so people can judge the product itself.

All marketing is honest. We will not name a client without permission, invent statistics, or claim Lift Right is certified or replaces formal safety training. It supports existing training. We use no person's name, photo, quote or score publicly without their consent, and we say openly that the prototype stores data in the browser.

Appendix A: Ready-to-Use LinkedIn Copy

Company page "About" text

Team Speed Studios is a four-person software team building interactive training simulations that run in a web browser. Our first product, Lift Right, puts warehouse staff inside a 360° warehouse to practise safe manual handling, with scored checkpoints and a supervisor dashboard. We are a student team, and we are honest about what we have built. Try the prototype and tell us what you think.

Post 1: Launch

Most manual-handling training is a poster and a signature. We built something different. Lift Right is a 360° warehouse you walk through in your browser. You check your route, assess the load, choose how to lift it, and a score tells you how well you decided. No headset, no install. We are a student team and this is a working prototype. Try it and tell us what we should improve: https://shresthasparas.github.io/Team-Speed/TeamSpeedStudios_Website/

Post 2: Spot the mistake (use the graphic in Appendix D)

A quick one from checkpoint 1 of Lift Right. What should you do before you even touch the load? A, B, C or D? Answer in the comments, and we will share the right one tomorrow (it is C: clear and check your route first). Try the full warehouse: https://shresthasparas.github.io/Team-Speed/TeamSpeedStudios_Website/

Post 3: Behind the build

I am [name] and I built [the part you built, such as the scoring engine] for Lift Right. The hardest part was [one real challenge]. What I learned: [one real lesson]. Try what we built: https://shresthasparas.github.io/Team-Speed/TeamSpeedStudios_Website/

Appendix B: Outreach Email Template

Subject: A free 10-minute demo: Lift Right, a browser-based manual-handling training simulation

Hi [Name],

I am [your name] from Team Speed Studios, a small student software team. We have built Lift Right, a training simulation where warehouse staff walk through a virtual warehouse and make safe-lifting decisions at six checkpoints. It runs in a normal web browser and gives supervisors a record of who has trained.

Would you be open to a free 10-minute demo, or would you prefer to try it yourself at https://shresthasparas.github.io/Team-Speed/TeamSpeedStudios_Website/? We are a student team and the prototype is early, so we would value your honest feedback on [Company]'s manual-handling training.

Best regards,

[Your name], Team Speed Studios

Follow-up (send once, after 3 or 4 days): "Hi [Name], I wanted to check whether you had a chance to look at the Lift Right demo. Happy to keep it to ten minutes at a time that suits you."

Appendix C: Demo Reel Storyboard

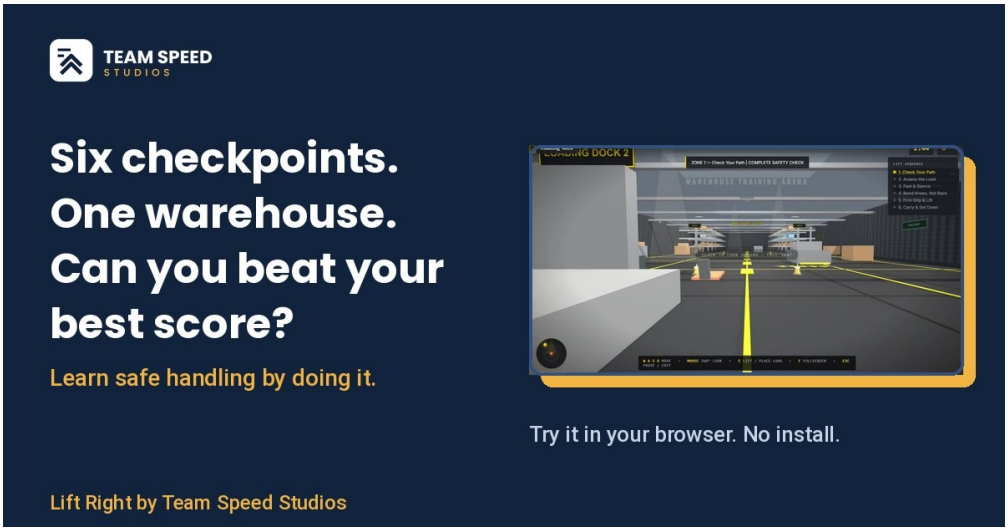

Clip	Shows	On-screen caption	Source in demo video
1 (20 s)	Walking to a checkpoint and answering the safety question	"Before you lift: what do you check first?"	About 4:00 to 4:20 of prototype_Video.mp4
2 (20 s)	Choosing a handling method for a load of a given weight	"Same load. Which method is safest?"	About 4:20 to 4:40
3 (25 s)	Supervisor view and CSV export	"Evidence, not attendance."	About 8:00 to 8:25

Export each clip vertically (9:16), add open captions so it works without sound, and end on the website address.

Appendix D: Social Media Graphics

Graphic for Post 2: Spot the mistake

Graphic for Post 1: Feature card

Appendix E: Posting Checklist

- Create the LinkedIn company page with the logo and the About text from Appendix A.
- Each member adds Team Speed Studios and Lift Right to their own profile.
- Post the feature card (Post 1), and add the website link.
- Send five personal outreach emails and note each date.
- Take a screenshot of every post and email, and add the date and screenshot to the table in section 6.
