Team Speed – Group Roles Report

CET257 Enterprise Project – Assignment 1, Task A2

1. Introduction

This report sets out how Team Speed divided responsibility for the Lift Right project, the reasoning behind each role allocation, and how the team's skills audits informed those decisions. It should be read alongside the completed skills audit forms and group registration form submitted in the A2 folder.

2. Team Roles

Team Member	**Role**	**Primary Responsibilities**
Shilu Chuke	Team Leader	Overall coordination, meeting scheduling, client liaison, tracking deliverables against the project plan, and chairing team decisions.
Swikriti Bashyal	UI/UX & Design Lead	Interface layout and visual design, HUD and screen wireframes, branding and marketing visuals (A6), and documentation quality control.
Sparas Shrestha	Backend Developer	Application logic, scoring engine, state management, data persistence (accounts, attempts, stats), and admin reporting features.
Namshu Hang Zhyedi Magar	Frontend Developer	3D scene and camera implementation, HUD rendering, input handling (movement/look), and integration of frontend with backend logic.

3. Basis for Role Allocation

Roles were allocated following individual skills audits completed by each member in the first week of the project, in which everyone rated their prior experience and confidence across development, design, project coordination and communication. The completed audits (see

Skills_Audit_Report.docx) showed Shilu strongest in project coordination and client-facing communication (5/5 each), Swikriti strongest in UI/UX design and prototyping tools (5/5), Sparas strongest in backend/application logic (5/5), and Namshu strongest in frontend/UI development (5/5). The clearest gap was 3D/graphics confidence outside Sparas and Namshu, which the team addressed by having Sparas build the initial Three.js scene scaffold in Week 2 before handing zone, camera and HUD work to Namshu.

Shilu Chuke was allocated the Team Leader role based on prior experience coordinating group work and strong communication skills, making her the natural point of contact for client liaison and for keeping the team on schedule against the project plan.

Swikriti Bashyal's audit reflected the strongest design background in the team, along with experience in visual communication tools, which supported her allocation as UI/UX & Design Lead, covering both the application's interface and the A6 marketing/branding deliverables.

Sparas Shrestha's audit indicated the most confidence with application logic and data handling, which informed the Backend Developer allocation — covering the scoring engine, state management and persistence of worker accounts and attempt history.

Namshu Hang Zhyedi Magar's audit showed the strongest interest and prior exposure to 3D/graphics work, supporting the Frontend Developer allocation, focused on the 3D scene, camera controls and HUD.

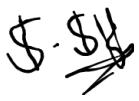

Roles were not treated as fixed silos: all members contributed to testing, documentation and the A7 presentation, and roles were revisited at each weekly meeting to redistribute work where deadlines were at risk.

4. Group Agreement

All members reviewed and agreed to this role allocation, and to the group rules set out in the accompanying Group Rules & Governance document, at the team's first formal meeting. Signed agreement is recorded on the Group Registration Form submitted alongside this report.

Signatures

> *Each member types their own name and the date they agreed. Typed signatures are acceptable.*
